Iteration 1

Let $\langle \cdot, \cdot \rangle = \langle \cdot, \cdot \rangle_{\mathbb{R}^n}$ be the euclidian scalar product with norm $\| \cdot \| = \| \cdot \|_{\mathbb{R}^n}$. Let for a SPD matrix W the scalar product $\langle \cdot, \cdot \rangle_W := \langle W \cdot, \cdot \rangle$ with associated norm $\left\| \cdot \right\|_W := \left\| W^{\frac{1}{2}} \cdot \right\|.$ Consider an update

$$x_{n+1} = w_n + \omega_n d_n, \quad \phi(\omega) = \frac{1}{2} \|f - A(x_n + \omega d_n)\|_W^2 = \frac{1}{2} \|r_n - \omega A d_n\|_W^2$$
 (1)

Then we have a minimizer for

$$\omega_* = \frac{\langle r_n, Ad_n \rangle_W}{\|Ad_n\|_W^2}, \quad \phi(\omega_*) - \phi(0) = -\frac{\omega_*}{2} \langle r_n, Ad_n \rangle_W = -\frac{\omega_*^2}{2} \|Ad_n\|_W^2$$
 (2)

If A is SPD, we can either minimize with respect to the norm $\|\cdot\|$ or $\|\cdot\|_{A^{-1}}$

$$\omega^{(1)} = \frac{r_n^{\mathsf{T}} A d_n}{(A d_n)^{\mathsf{T}} A d_n}, \quad \omega^{(2)} = \frac{r_n^{\mathsf{T}} d_n}{(A d_n)^{\mathsf{T}} d_n}$$

If A is not symmetric, $\omega^{(2)}$ is still well defined, if A is elliptic $(\xi^{\mathsf{T}} A \xi \geq \alpha \xi^{\mathsf{T}} \xi)$ and corresponds to a Galerkin solution over the space Vect $\{x_n, d_n\}$.

Suppose that d_n is defined by a preconditioner, $Bd_n = r_n$.

Now let us consider a Gauss-Seidel-type iteration with A = L + U and

$$x_{n+1} = (1 - \omega)x_n + \omega L^{-1}(b - Ux^n) = x_n + \omega L^{-1}r^n.$$

2 Grid

$$x_{n+1} = x_n + \omega w_n, \quad w_n = Br_n, \quad r_n := b - Ax_n \tag{3}$$

Mixed FEM 3

Grid 4

We suppose the following numbering

$$ii = \sum_{j=0}^{d-1} \left(\prod_{k=j+1}^{d-1} n_k \right) i_j, \quad i = [i_0, \dots, i_{d-1}]$$
 (4)

5 Mixed FEM

The mixed formulation on a d-dimensional brick leads to

$$\begin{bmatrix} A_1 & & & & B_1 \\ & A_2 & & & B_2 \\ & & \ddots & & \vdots \\ & & & A_d & B_d \\ C_1 & C_2 & \cdots & C_d & D \end{bmatrix} \begin{bmatrix} u_1 \\ u_2 \\ \vdots \\ u_d \\ p \end{bmatrix} = \begin{bmatrix} g_1 \\ g_2 \\ \vdots \\ g_d \\ f \end{bmatrix}$$
 (5)

which leads to the pressure equation

$$Sp = f - \sum_{i=1}^{d} C_i A_i^{-1} g_i, \quad S := D - \sum_{i=1}^{d} C_i A_i^{-1} B_i$$
 (6)

which allows to recover the fluxes by

$$A_i u_i = g_i - B_i p.$$

5.0.1 Elimination in d = 1

We have the following equations

$$\begin{cases}
a_{i,i-1}u_{i-1} + a_{i,i}u_i + a_{i,i+1}u_{i+1} + b_{i,i-\frac{1}{2}}p_{i-\frac{1}{2}} + b_{i,i+\frac{1}{2}}p_{i+\frac{1}{2}} = g_i \\
c_{i-\frac{1}{2},i-1}u_{i-1} + c_{i-\frac{1}{2},i}u_i = f_{i-\frac{1}{2}} \\
c_{i+\frac{1}{2},i}u_i + c_{i+\frac{1}{2},i+1}u_{i+1} = f_{i+\frac{1}{2}}
\end{cases}$$
(7)

We can use the last two equations to eliminate $u_{i\pm 1}$, thus

$$x_{i}u_{i} = g_{i} - \frac{a_{i,i-1}}{c_{i-\frac{1}{2},i-1}} f_{i-\frac{1}{2}} - \frac{a_{i,i+1}}{c_{i+\frac{1}{2},i+1}} f_{i+\frac{1}{2}} - b_{i,i-\frac{1}{2}} p_{i-\frac{1}{2}} - b_{i,i+\frac{1}{2}} p_{i+\frac{1}{2}}, \quad x_{i} = a_{i,i} - \frac{a_{i,i-1} c_{i-\frac{1}{2},i}}{c_{i-\frac{1}{2},i-1}} - \frac{a_{i,i+1} c_{i+\frac{1}{2},i}}{c_{i+\frac{1}{2},i+1}} - \frac{a_{i,i+1} c_{i+\frac{1}{2},i}}{c_{i+\frac{1}{2},i+1}} - \frac{a_{i,i+1} c_{i+\frac{1}{2},i}}{c_{i+\frac{1}{2},i+1}} - \frac{a_{i,i-1} c_{i-\frac{1}{2},i}}{c_{i+\frac{1}{2},i+1}} - \frac{a_{i,i+1} c_{i+\frac{1}{2},i}}{c_{i+\frac{1}{2},i+1}} - \frac{a_{i,i+1} c_{i+\frac{1}{2},i}}{c_{i+\frac{1}{2},i+$$

For a boundary node we have, say the left, i = 0, we have

$$\begin{cases}
a_{0,0}u_0 + a_{0,1}u_1 + b_{0,\frac{1}{2}}p_{\frac{1}{2}} = g_0 \\
c_{\frac{1}{2},0}u_0 + c_{\frac{1}{2},1}u_1 = f_{\frac{1}{2}}
\end{cases}$$
(9)

Using the last equation to eliminate u_1 , thus

$$x_0 u_0 = g_0 - \frac{a_{0,1}}{c_{\frac{1}{2},1}} f_{\frac{1}{2}} - b_{0,\frac{1}{2}} p_{\frac{1}{2}}, \quad x_0 = a_{0,0} - \frac{a_{0,1} c_{\frac{1}{2},0}}{c_{\frac{1}{2},1}}$$

$$(10)$$

This gives the following finite difference stencil on the boundary

$$\frac{c_{\frac{1}{2},0}}{x_0} \left(g_0 - \frac{a_{0,1}}{c_{\frac{1}{2},1}} f_{\frac{1}{2}} - b_{0,\frac{1}{2}} p_{\frac{1}{2}} \right) + \frac{c_{\frac{1}{2},1}}{x_1} \left(g_1 - \frac{a_{1,0}}{c_{\frac{1}{2},0}} f_{\frac{1}{2}} - \frac{a_{1,2}}{c_{\frac{3}{2},2}} f_{\frac{3}{2}} - b_{1,\frac{1}{2}} p_{\frac{1}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} \right) = f_{\frac{1}{2}} \left(g_1 - \frac{a_{1,0}}{c_{\frac{1}{2},0}} f_{\frac{1}{2}} - \frac{a_{1,2}}{c_{\frac{3}{2},2}} f_{\frac{3}{2}} - b_{1,\frac{1}{2}} p_{\frac{1}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} \right) = f_{\frac{1}{2}} \left(g_1 - \frac{a_{1,0}}{c_{\frac{1}{2},0}} f_{\frac{1}{2}} - \frac{a_{1,2}}{c_{\frac{3}{2},2}} f_{\frac{3}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} \right) = f_{\frac{1}{2}} \left(g_1 - \frac{a_{1,0}}{c_{\frac{1}{2},0}} f_{\frac{1}{2}} - \frac{a_{1,0}}{c_{\frac{3}{2},2}} f_{\frac{3}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} \right) = f_{\frac{1}{2}} \left(g_1 - \frac{a_{1,0}}{c_{\frac{3}{2},0}} f_{\frac{3}{2}} - \frac{a_{1,0}}{c_{\frac{3}{2},2}} f_{\frac{3}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} - b_{1,\frac{3}{2}} p_{\frac{3}{2}} \right) = f_{\frac{3}{2}} \left(g_1 - \frac{a_{1,0}}{c_{\frac{3}{2},0}} f_{\frac{3}{2}} - \frac{a_{1,0}}{c_{\frac{3}{2},2}} f_{\frac{$$

and on the interior

$$\frac{c_{i+\frac{1}{2},i}}{x_i} \left(g_i - \frac{a_{i,i-1}}{c_{i-\frac{1}{2},i-1}} f_{i-\frac{1}{2}} - \frac{a_{i,i+1}}{c_{i+\frac{1}{2},i+1}} f_{i+\frac{1}{2}} - b_{i,i-\frac{1}{2}} p_{i-\frac{1}{2}} - b_{i,i+\frac{1}{2}} p_{i+\frac{1}{2}} \right) + \frac{c_{i+\frac{1}{2},i+1}}{x_{i+1}} \left(g_{i+1} - \frac{a_{i+1,i}}{c_{i+\frac{1}{2},i}} f_{i+\frac{1}{2}} - \frac{a_{i+1,i+1+1}}{c_{i+\frac{3}{2},i+1+1}} f_{i+\frac{3}{2}} - b_{i+1,i+\frac{1}{2}} p_{i+\frac{1}{2}} - b_{i+1,i+\frac{3}{2}} p_{i+\frac{3}{2}} \right) = f_{i+\frac{1}{2}}$$

$$\left\{ \tag{11} \right\}$$
